## Handrail sanitization solution

Viruses and bacteria may be transferred through contact with the handrails of escalators and moving walks, posing a potential health hazard. Public areas with dense passenger flow are fast channels for the spread of viruses and bacteria. The question of how to clean handrails most efficiently has become a matter of great urgency.

### Multiple solutions

**1 Professional Schindler Maintenance Services**

**2 CleanRail**

**3 Ultra UV**

**4 Ultra UV PRO**

\* Sanitization solutions can be selected individually or combined to achieve a higher standard of hygiene protection.  
\* The Ultra UV device requires the use of either Ultra UV or Ultra UV PRO.

### Schindler handrail Ultra UV device

Schindler's handrail Ultra UV device uses germicidal UVC light to irradiate the handrails at a short distance. This directly damages DNA<sup>1)</sup> and RNA<sup>2)</sup>, which are the genetic materials of bacteria and viruses, preventing their rapid spread, and also provides a comfortable handrail surface for passengers.

LED lighting technology, handrails are disinfected in an efficient and environmentally friendly way. The device is installed inside the escalator or moving walk to ensure passenger safety. The design makes it easy to install. The Schindler handrail Ultra UV device is a practical solution to help prevent the rapid spread of bacteria and viruses.

Thanks to the physical disinfection process using UVC

<sup>1)</sup> DNA is the abbreviation for deoxyribonucleic acid.  
<sup>2)</sup> RNA is the abbreviation for ribonucleic acid.
