

We Elevate... Innovation

Schindler is a world leader in lift and escalator technology.

In 1952 we introduced the first electronic lift controls, in 1996 we pioneered lift destination control and today we are leading the industry in connected digital services.

Our Schindler Ahead digital services are paving the way for a new era of lift communication and management. Never before have we been able to offer such ground-breaking levels of reliability, transparency and uptime.

Since 1874 Schindler has grown into a leading global elevator and escalator business. On the way, we have shaped the industry, defined best practice and never stopped searching for new ways to improve on every aspect of what we do.

Industry Leading Innovation

- Schindler Ahead opens up a world of new possibilities including real-time remote monitoring, reporting, diagnostic and media communication services.
- Schindler's PORT Technology revolutionises the science of optimising traffic flow through a building, while offering personalised service and access control.
- iSPECI is a mobile phone based diagnostic tool that allows our technicians to interact directly with a lift's control panel. This allows us to interpret error logs, assists with fault finding and enables our technicians to perform real-time testing and configuration tunings.

That's the Schindler difference.

We Elevate
