

Schindler CleanMobility solutions

Schindler CleanAir Ion for California

Schindler CleanAir Ion cleans the air inside elevator cabins for passengers, providing continuous reduction of airborne viruses and bacteria.

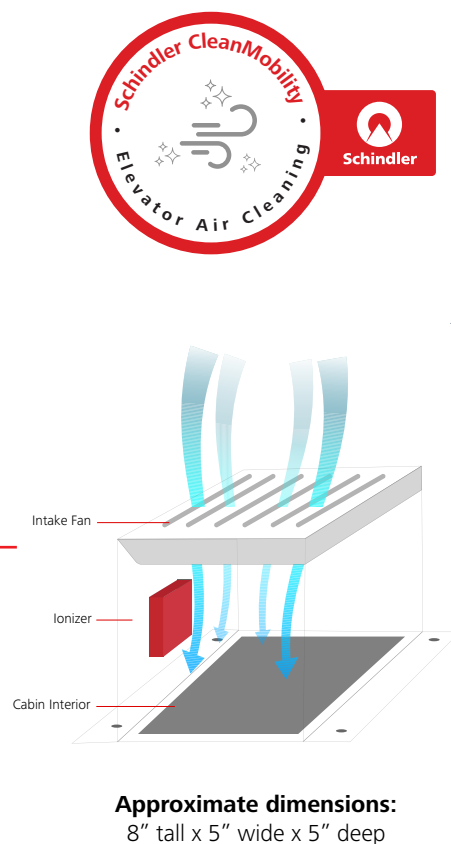

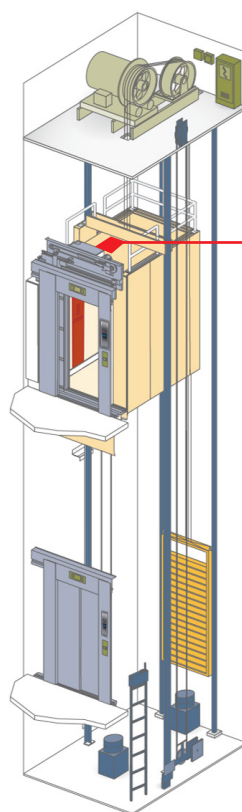

How it works

The air inside elevator cabs can harbor numerous airborne contaminants – from viruses and bacteria, to mold and volatile organic compounds.

Schindler CleanAir Ion, mounted on top of the elevator cab, generates millions of positively and negatively charged ions. The integrated fan circulates the ionized air inside the cabin space, allowing the ions to disperse easily, and to attack airborne contaminants. Integrated LEDs provide supplemental cabin lighting.

The unit is mounted out of sight above the elevator cabin, and circulates ionized air down into the cabin below.

Schindler CleanAir Ion is designed not to require annual maintenance, and to meet existing California code and regulatory requirements.

Automatic cleaning

The system continuously cleans the air inside the cabin.

California compliant

Designed to meet California regulations

Quick and easy

Compatible with all brands of equipment, Schindler CleanAir Ion can be installed into your elevator quickly and easily.
