Problems with Firefighter's Service

If you discover a problem with the firefighter's service, inform Schindler **IMMEDIATELY**.

INDEPENDENT SERVICE

A switch is provided in the car-operating panel. If it is a key switch, it is removable in the **OFF** position only. When the switch is turned to the **ON** position, all previously registered car calls for that car will be canceled.

While in the **ON** position, the care will park with its doors open. It will move in response to the last care call registered from inside the car. When a call is entered, the doors will begin to close. If the door button, or light curtain, is activated, the doors will reopen and the call will be canceled. Only the last car call entered will be registered by the system. When the switch is in the **OFF** position, the car returns to normal service operation.

Note: In the event of a **FIRE EMERGENCY RECALL**, a car on Independent Service will be overridden and recalled to the fire return floor.
