Schindler Elevator Interiors
Distinctive cabs for today’s world
New installations
If you are a designer or architect, Schindler elevator interiors provide an excellent opportunity to upgrade from a standard interior with a wide selection of surface materials and lighting options. Exercise your creativity and achieve just the right style.

Modernization and upgrades
Cab remodeling is a great way to add value to any building. If you are a building owner or manager, Schindler has a pre-designed cab that will fit your style and budget. Choose from more than 40 cabs, each with an almost limitless selection and combination of surface materials, lighting and hardware. But occasionally, someone has a unique concept that needs a custom approach. For those circumstances Schindler offers a complete customization option that will deliver your vision to your cab.

Ever greener
We offer a broad line of eco-friendly elevator cab interiors and super-efficient LED (Light Emitting Diode) ceiling light options. Our elevator professionals can assist in meeting LEED requirements for any project. Our “green” cab interiors are constructed of environmentally friendly materials with no added urea-formaldehyde. The low emissions adhesive we use in manufacturing our components is also environmentally friendly and the panel substrates and finishes contain a significant portion of recycled material.

*LEED is a registered trademark of the U.S. Green Building Council.
Geneva I

- LEED® compliant
- Elevator code compliant
- Available in Super Light

Olten I:
Layer 2 in Satin SS; layer 3, 4 & 5 in Wild Cherry laminate; Frame ceiling; 2" flat handrail

Olten II:
Layer 2 & 3 in Satin SS; layer 4 & 5 in Manitoba Maple laminate; Island Downlight ceiling in Satin SS; 2" flat handrail

Geneva I: layer 2, 3, 4 & 5 in Wild Cherry laminate; Frame ceiling; 2" flat handrail; pad buttons
Berne I

- LEED® compliant
- Elevator code compliant
- Available in Super Light

Berne I:
Layer 2, 4, 5 & 6 in Fonthill Pear; layer 3 in Satin SS; Modular Downlight ceiling in Glossy Black laminate; 2” flat handrail

Zug I:
Layer 2 in Windsor Mahogany laminate; layer 3 in Black laminate; layer 4, 5 & 6 in Tawny Legacy laminate with mirrors on the back wall; Modular Downlight ceiling in Glossy Black laminate; 2” flat handrail

Laminates:
- Fonthill Pear
- Burnished Chestnut
- Asian Sun
- Kenya Mahogany
- Milano Amber
- Milano Quartz
- Girona Falls
- Tawny Legacy
- Fusion Maple
- Brighton Walnut
- Biltmore Cherry
- Fusion Maple
- Biltmore Cherry
Locarno I

- LEED® compliant
- Elevator code compliant
- Available in Super Light

Winterthur I:
Layer 2 in S.WL SS; layer 3 in Black laminate; layer 4, 5 & 6 in Western Tan laminate; Modular Downlight ceiling in Glossy Black laminate; 1.5” tubular handrail

Winterthur II:
Layer 2 & 3 in S.WL SS; layer 4, 5 & 6 in Western Tan laminate; Island Downlight ceiling in Satin SS; 1.5” tubular handrail

Locarno I: layer 2 in Windsor Mahogany laminate; layer 3 in Black laminate; layer 4, 5 & 6 in Coral Roca laminate; Frame ceiling; 2” flat handrail
Zurich I

- LEED® compliant
- Elevator code compliant
- Available in Super Light

Zurich II:
Layer 2, 3, 4 & 5 in Wild Cherry laminate; Frame ceiling, 4” flat handrail

Zurich III:
Layer 2 in Satin SS; layer 3, 4 & 5 in Grey Pampas laminate; Island Downlight ceiling in Satin SS, 2” flat handrail
Basel I

- LEED® compliant
- Elevator code compliant
- Available in Super Light

Basel I: Layer 2 & 4 in Fusion Maple laminate; layer 3 & 5 in Black laminate; Frame ceiling; 2” flat handrail

Basel II: Layer 2 & 4 in Wild Cherry laminate; layer 3 in Black laminate; Island Downlight ceiling in Satin SS; 2” flat handrail

Basel III: Layer 2 & 4 in Xanadu laminate; layer 3 in Satin SS; Island Downlight ceiling in Satin SS; 4” flat handrail
Arbon I

- LEED® compliant
- Elevator code compliant
- Available in Super Light

Arbon I:
Layer 2 & 4 in Amber Cherry laminate; layer 3 in Satin SS;
Island Downlight ceiling in Satin SS; 2" flat handrail

Arbon II:
Layer 2 & 4 in Xanadu laminate; back wall layer 4 in mirror;
layer 3 in Satin SS; Island Downlight ceiling in Satin SS;
2" flat handrail

Arbon III:
Layer 2 & 4 in Fonthill Pear laminate; accents in Linen SS;
layer 3 in Satin SS; Island Downlight ceiling in Satin SS;
2" flat handrail

Noville I:
Layer 2 & 4 in Organic (Nickel); layer 3 in Satin SS; Inlay in Black Anodized Aluminum; Island Downlight ceiling in Designer White laminate; 1.5” tubular handrail

Noville II:
Layer 2 & 4 in Organic (Nickel); vertical accents in Sandtex.BA SS; layer 3 in Satin SS; Inlay in Black Anodized Aluminum; Island Downlight ceiling in Designer White laminate; 2” flat handrail
Schindler Elevator Corporation knows elevator interiors like no one else in the industry. Over the last few years we have successfully provided kits to upgrade over 10,000 cabs all over North America. Our Schindler pre-designed models seem to please almost everyone. But for those looking for something a little different, we have custom interior options.

The process
Occasionally, a Schindler sales representative is asked by an architect, designer or elevator consultant to price a cab that has been carefully specified to blend with the overall scope of a project. When this happens, it is the perfect time to set up a design session with one of our experienced, knowledgeable and competent staff. They will walk you through the design process using highly-customized 3D modeling software. Video conferencing is easy, requires no special hardware, software or cameras (although you may use one if you like).

Schindler will price the cab as originally specified and also provide any value-engineered alternatives that were created during the design session. These alternatives will typically cost 20% less than the specified cab and will be easier to install and maintain. Often, these cabs are accepted as a practical alternative.

However, when clients choose to go forward with their original specified design, Schindler turns on its manufacturing expertise and becomes the specifier’s best friend. The results have been spectacular. Some of our most beautiful cabs have been produced in partnership with first-rate architects and designers. In fact, this collaborative approach has been so successful, that a LEED Accredited Professional is on staff to further enhance our ability to turn your ideas into reality.

| Lower panels in Black Quartz; upper panels in GageCast Woven Linear; Satin SS accent panels; 1.5” tubular handrail | Blue Mirror Glass hanging panels; Satin SS accent panels; Custom Island Downlight ceiling in Mirror SS with fiber optic “starry night” lighting; 1.5” tubular handrail | Lower panels in Verde Antique stone; upper panels in Curly Maple wood veneer; inlay in Satin SS; Custom Satin SS ceiling with LED perimeter lighting; custom handrail |

Most cabs have existing wall panels, ceilings and handrails. If the weight of those items closely matches the weight of the new items listed here, no adjustments to your system are necessary. However, if there is a significant weight difference, or if there are presently no panels in your cab, the impact of the weight must be considered, as should the super-light panel option (additional cost).
Elevator ceilings and lighting

All Schindler elevator ceilings shown below have frames constructed of sturdy 1½” extruded “T” aluminum. All are made with access to the ceiling exit hatch and allow for ventilation around the perimeter.

Economy Frame Ceiling
This non-welded aluminum frame ceiling is divided into 3 sections (4 or 5 sections in larger elevators), with a translucent light-diffusing panel in each section.

Ceiling frame finish:
- Brushed

Options:
- Fluorescent light kit
- LED light kit
- Trash guard

Frame Ceiling
This ceiling style is lightweight and energy efficient. Reuse your existing fluorescent fixtures or you can purchase new ones. The aluminum ceiling frame is divided into six sections (nine for larger elevators); each section contains either a translucent light-diffusing panel or an aluminum eggcrate diffuser.

Ceiling frame finish:
- Brushed (standard)
- Black
- Bronze
- Custom

Diffuser:
- Translucent
- Aluminum eggcrate

Options:
- Fluorescent light kit
- LED light kit
- Trash guard

Options:
- Fluorescent light kit
- LED light kit
- Trash guard

Modular Downlight Ceiling
This option combines the efficiency and light weight of the Frame Ceiling with the style of modular lighting. The aluminum ceiling frame is divided into six sections (nine for larger elevators); each section contains a fire-rated panel faced with plastic laminate.

Ceiling frame finish:
- Brushed (standard)
- Black
- Bronze
- Custom

Diffuser:
- Translucent
- Aluminum eggcrate

Options:
- Fluorescent light kit
- LED light kit
- Trash guard

Island Downlight Ceiling
This premium ceiling is made of fire-rated substrate, surfaced with a choice of plastic laminate, brushed aluminum, stainless steel or bronze. Ceiling is divided into six panels (nine for larger elevators); each panel contains a downlight fixture.

Ceiling panel finish:
- Plastic laminate
- Brushed aluminum laminate
- Bronze tone aluminum laminate
- Satin stainless steel
- Mirror stainless steel
- Satin bronze
- Mirror bronze

Lighting:
- Standard LED
- Premium LED
- Halogen

Standard LED
- No heat or UV in the light beam
- 120˚ beam spread
- Long life
- Tamper proof
- No mercury

Premium LED
Same as standard LED, plus:
- 0-100% Digital Dimming
Optional Upgrade:
- Integrated Emergency
- Light battery backup

Schindler Elevator Interiors | 39
Handrails and bumpers

Handrails are through-bolted at our factory, making Schindler elevator handrails among the most secure in the industry. Handrails are mounted 32" above the floor, unless otherwise requested, and meet or exceed ADA specifications. Standard handrails and bumpers have returned ends for added safety and durability, and set screws for access.

Bumpers are an option and, like our handrails, they are securely through-bolted at the factory. Bumpers are mounted 12" above the floor, unless otherwise requested.

Handrails and bumpers are available in satin stainless steel, satin bronze, mirror stainless steel or mirror bronze.
Interlocking panels
The patented interlocking panel joint is how the panels come together. As each layer is installed in the cab, the next layer hides the screws from the layer below. Unlike traditional hanging panels, no clips or hardware other than the provided screws, are necessary.

Top cap
Once all the panels are securely mounted into the cab shell, the walls are finished with an aluminum top cap. This piece features an integrated pad hook channel, which eliminates the visual nuisance and the added cost of having pad buttons installed on your panels.

Protect your new cab interior with superior vinyl pads with pre-attached pad hooks. The rugged polyester thread throughout will stand up to years of use. Matching, heavy duty vinyl bindings are added for good looks and extra durability on all edges.

Ceilings
The right ceiling can dramatically affect the appearance of a cab interior. Schindler offers four standard ceiling options, with many variations. See pages 38 and 39 for details. Custom ceilings are also available, see page 36.

Reveals
Reveals provide a sophisticated finish to the cab interior. As in fine furniture, the designs include corner pieces that lead the eye to the rich surface materials. Our reveals are made of black powder coated steel, satin stainless steel or satin bronze.

Panel replacement
There are several reasons why a building owner would want to change one or more panels down the road: damage, vandalism or possibly a change in the building’s appearance. With the Schindler Elevator Interiors patented interlocking panel system, replacement for any reason is fast and easy.

Pre-attached handrails
Yet another benefit of our system is that all handrails and bumpers come pre-attached and through-bolted from our factory. This makes them the most safe and secure in the industry! See page 40 and 41.

Toe kicks
Toe kicks (layer 1) prevent damage to the interior surface material by providing a small buffer zone at the bottom of the cab and are available in black powder coated steel, satin stainless steel or satin bronze. Just above the toe kicks are the aluminum toe kick binders that protect the bottom edge of the panels. This binder is what the first panel (layer 2) rests in, and provides the ventilation necessary to meet elevator code.

Flooring
Most building owners prefer to select flooring that matches other floors in their building. One important reminder: if new flooring will add significant weight (ceramic tile or stone, for example) be sure to consult with your Schindler representative beforehand, as the weight may impact the elevator system.

Panel binder
For cabs with side opening doors, the visible panel edges near the door(s) are protected with aluminum panel binders. The angle on the panel binder will deflect any objects that may otherwise damage the panels. This is yet another feature not found with traditional hanging panels.

Front returns and doors
Decide if your front return wall and doors require attention. You can elect to keep them as is, refinish them or replace them. A Schindler Elevator Interiors panel can also be applied to most return walls.

Fixtures
You can upgrade the car operating panel, position indicator, telephone and other fixtures to more modern designs. Often, they can introduce new functionality at the same time.

Express ordering
Need your cab interior yesterday? Express manufacturing and shipping is available for certain models at a higher price. Contact your Schindler representative for details.

Final approval
Schindler can supply a computer-generated image showing how your cab will look and samples of the actual surface materials so that you can confirm your order with confidence. Ask your representative for a free presentation board today.
