Recommended routines to limit contagion using the elevator

Our goal is to contribute to preventive measures while ensuring the least possible negative impact on our customers' health, safety and operations.

We recommend:

- Wash push buttons on floor and in lift car with disinfectant
- Wash hand rails in elevator car with disinfectant
- Wear gloves or insulate with garments when using push buttons and handles
- Limit the number of people in the lift car, keep a distance
- If you are infected or have symptoms, take the elevator alone and show clear stop signs to others who will enter the elevator
- To avoid unnecessary downtime, we recommend keeping the door threshold free of foreign bodies and take extra care so that doors do not collide when shipping cargo
